

Education

York University, Lassonde School of Engineering

BSc in Computer Science, Year 4. **GPA: A**

Coursework: OOP, Algorithms, Data Structures, Software Design, Operating Systems, Databases

Expected

Grad. June 2023

University of Toronto St. George

BSc in Computer Science, Year 1. Coursework: Python programming, Linear Algebra

Sept 2018 – April 2019

Western University

Double Major BSc in Biology and Medical Sciences

Graduated June 2017

Work Experience

Mobile Software Engineer I

TD Bank Group

Jan 2023 – Present

- Led migration of the mortgage details screen from legacy XML views to Jetpack Compose, improving UI maintainability and reducing boilerplate
- Architected features using MVVM/MVI with unidirectional data flow, leveraging Kotlin Coroutines and Flow for asynchronous and reactive state management
- Optimized Compose recomposition performance and diagnosed/resolved memory leaks to improve app stability and responsiveness
- Wrote unit and UI tests (*JUnit*, *Robolectric*, *Compose Testing*) to ensure reliability across releases and reduce regressions
- Collaborated cross-functionally with design, QA, and backend teams to ship features end-to-end, participating in code reviews to uphold code quality standards
- Utilized GitHub Copilot and various SKILLS.md to accelerate development, improving code coverage and delivery speed across tasks and implementations
- *Kotlin*, *Jetpack Compose*, *Coroutines/Flow*, *Android Studio*, *Git*, *SourceTree*, *Jira*, *Charles*

Junior Front End Developer (Co-op)

TAKU

Sept 2021 – Apr 2022

TAKU is the all-in-one retail management and POS software solution

- Designed, developed, and delivered the UI of TAKU's SaaS application
- Performing maintenance on the front-end of the application using *agile development practices*
- Participate in code reviews to ensure code quality and code standards
- *HTML*, *SCSS*, *Angular* + *TypeScript*, *VSCode*, *Sourcetree*, *Jira*

Project Experience

Personal AI Secretary – TypeScript, React, Cloudflare

July 2026 ~ Present

- Built a personal AI assistant capable of web search/browsing to answer queries and complete tasks in real time
- Implemented a ChatGPT-style conversational interface for natural, multi-turn interaction
- Designed a memory/context system so the assistant retains relevant context across sessions
- Tested out different Agents SDKs (*OpenAi*, *Claude*, *Google ADK*, *LangGraph*)
- Planning to incorporate *n8n* for any automated functionalities soon

Co-Curricular Activities

Entrepreneurship and Intense Programming Camp

Korea Advanced Institute of Science and Technology (KAIST)

Daejeon, South Korea

June – July 2019

- Developed a prototype mobile app aimed to help KAIST students bookmark any 'favourite' post from one of their school forums. Includes shortcuts to various websites used among KAIST students, such as course planner, academic calendar, etc
- Developed and designed the backend REST API using *expressJS* and *sequelize*. Utilized JWT for log-in authentication and AWS for running necessary server

Languages & other tools

Proficient: Kotlin • Jetpack Compose • Android Studio • Coroutines/Flow • Java • TypeScript/JavaScript • Git

Familiar: Sourcetree • Jira • HTML • CSS/SCSS • Angular • Dart • Flutter • VSCode • TailwindCSS

Prior Experience: React • Next.js • Python • Go • GraphQL • Nest.js • C • PostgreSQL • MongoDB • Express.js
